

XM radio has changed the way I get my information now. I can listen to the news, sports, and weather along with an almost infinite number of music stations all while on the go in my car WHERE EVER I may be traveling to. Just because XM radio has set a new precedent in how information can be sent to the user in a cost efficient and timely matter is a great thing, not something that should be censored. America was and is still built on innovation. Please remember this fact when making your decision.
